

Website Design Document – Brew Gold Coffee

This document was created by Alexandre Alves de Souza and Rafael Ramos dos Santos as part of the COIL Project: Brazil-China E-commerce Initiative

1. INTRODUCTION

This document aims to clarify the decisions made during the interface design of the website *Brew Gold Coffee*, conceived as the result of collaboration between students from Fatec São Caetano do Sul and Tianjin Normal University for the Coil Project: Brazil-China E-Commerce Initiative. Firstly, the context, design goals and target audience will be described in order to present the project developed. Next, the visual identity of the website, which was designed to align with the aforementioned goals and the expected impact on the target audience. Finally, the proposed structure for the operation of the system's interfaces and their resulting prototypes are presented.

2. PROJECT CONTEXT

The project aimed at the creation of an e-commerce platform developed to present a Brazilian product to the Chinese market. To determine the ideal product for the group, the students from both universities catalogued possibilities and discussed the potential of each product for the Chinese consumer, which resulted in the choice of coffee beans, a product simultaneously attractive to the audience and viable in logistical and financial terms.

In the subsequent stages of the project, the focus was on raising the group's knowledge about coffee through the study of its origin, cultivation and processing methods, bean varieties, sustainability and quality aspects, financial and logistical data, and real producers.

In this process, it was observed that coffee beans can generate very different products depending on how they are cultivated and processed, with flavors ranging from bitter to sweet. Comparing this information with the target audience's preferences, it was noticed that sweet and mild flavors are preferred. They are typically found in specialty considered coffees, which preserve natural aspects of the coffee beans through lower-impact processing methods, making this, therefore, the main product category to be offered by the website.

3. DESIGN GOALS

The main design focus was to ensure a complete consumption experience, covering the stages of product discovery, purchase consideration through information and other users' reviews, adding the product to the cart, completing the purchase process, tracking the order status, publishing a review, and requesting support services (when necessary). Practicality was sought throughout the entire shopping journey, prioritizing the relevance of information over its excess, resulting in interfaces that communicate with the user in a clear manner.

Given the emphasis on a foreign product, even if widely known worldwide, the website design was also oriented toward the dissemination of knowledge about Brazilian coffee, presenting its history, qualities and the relationship of its cultivation with relevant socio-environmental aspects, so as to introduce coffee consumption to new audiences and elevate the image of the product.

4. TARGET AUDIENCE

The developed platform seeks to attract Chinese consumers who show interest in memorable consumption experiences, through coffees that combine quality, authenticity and sustainability. The primary expected audience is composed of young professionals from urban centers of the middle and upper classes who are willing to invest larger amounts in products with high added value and unique characteristics. These

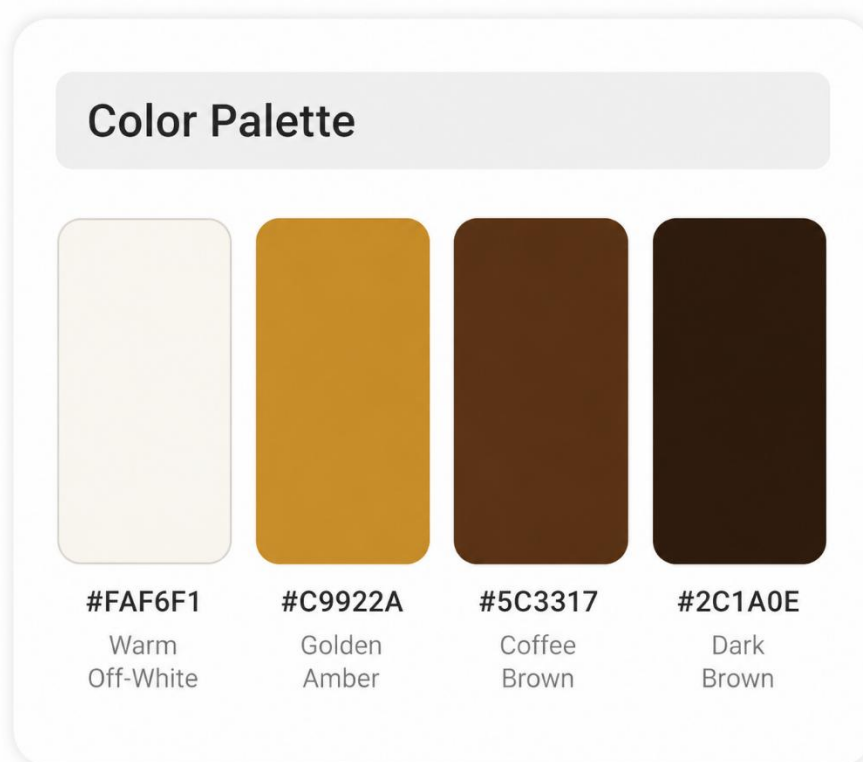

are consumers already accustomed to using e-commerce platforms, who seek to observe detailed information, reviews and product certifications before deciding to make a purchase.

The platform is also expected to reach coffee enthusiasts, who are inclined to explore the specialty coffee options available on the market in search of the best experiences. This group of consumers may be more critical regarding the coffee's provenance, evaluating origin, sustainable practices, processing methods, quality certifications and flavors.

The *Brew Gold* can also reach consumers who do not yet have sufficient knowledge about coffee and need additional information, and for both this group and those mentioned above, the inclusion of details about the history of Brazilian coffee and its characteristics on the website's pages is of great importance.

5. VISUAL IDENTITY

Although coffee is a widely recognized product around the world, the success of *Brew Gold Coffee* depends on being able to communicate to the consumer the difference between traditional and specialty coffees, highlighting the influence of the bean species, origin, processing methods and quality certifications on the coffee consumption experience. For this reason, the website's visual identity seeks to reinforce the premium image of the product, elevating the perception of its value. This idea was executed through the choice of shades of brown and gold, which have an instant association with coffee and the flavors it evokes, such as chocolate and caramel. In the image below it is possible to view the set of colors present in the website's interfaces.

The system’s typography aligns with the desired proposal, with titles using the *Playfair Display* font in order to convey tradition and sophistication, while *Nunito Sans* is the font that appears in paragraphs to bring simple legibility and soften the visual impact brought by the titles, maintaining the clarity of the interfaces. The image below presents an example of a combination between the two chosen fonts.

6. WEBSITE FUNCTIONALITIES

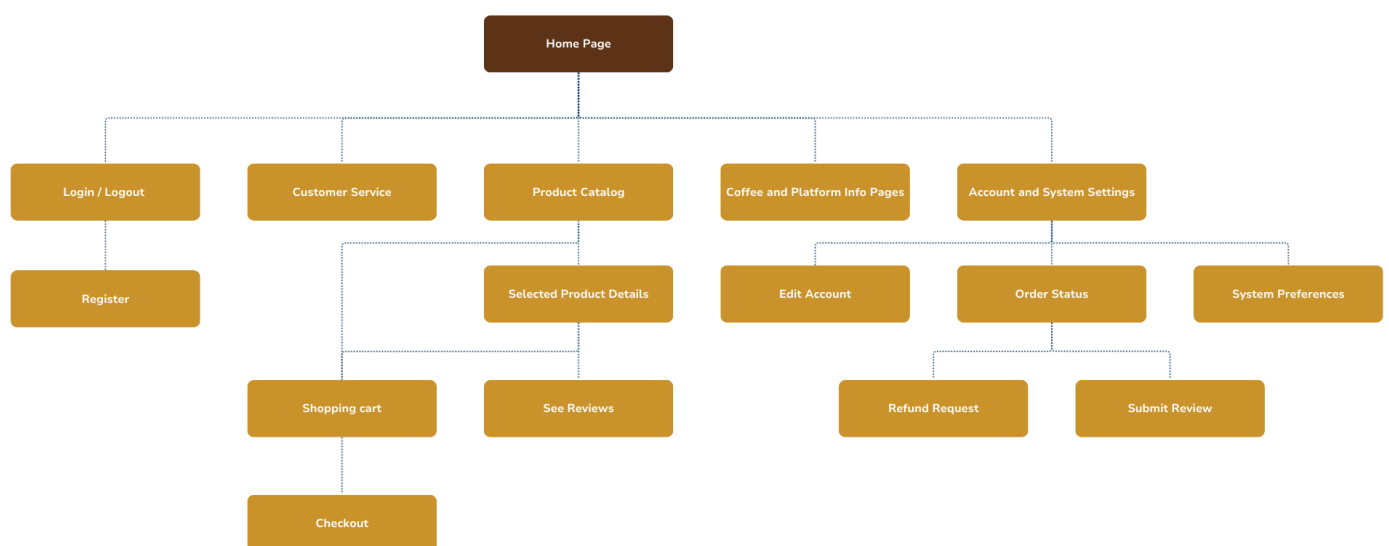

The list of functionalities below defines the set of features available to system users. In more specific software engineering documentation, these features would be described in detail through functional requirements and technical diagrams, known as UML diagrams.

FUNCTIONALITY	DESCRIPTION
User Authentication	Users are allowed to register and log into the platform.
Product Catalog	Coffee products are displayed in a list view. Users can search, filter, and sort products to easily find their desired items.
Product Details Page	Details about a selected product are shown, such as certifications, tasting notes and story.
Wishlist	Users can save products on a personal Wishlist for future purchases or comparison.
Product Reviews	Customers who have purchased a product can publish reviews and ratings, which are displayed to other users to support their purchasing decisions.

Shopping Cart	Selected products are stored and displayed in a shopping cart, allowing users to review or modify their purchase before checkout.
Checkout	Users provide shipping information, choose an available payment method, and complete their purchase.
Order Status	Users can access their order history and track the current status of their purchases, including tracking codes and estimated delivery dates.
Coffee Info Pages	Informational pages present the history of coffee, its production process, characteristics, certifications, and relationship with sustainability.
Account and System Settings	Users can manage their profile information, delivery addresses, account preferences, and system settings.
Customer Services	Customer support features include refund requests, frequently asked questions, and live chat assistance for various user needs.

7. NAVIGATION FLOWS

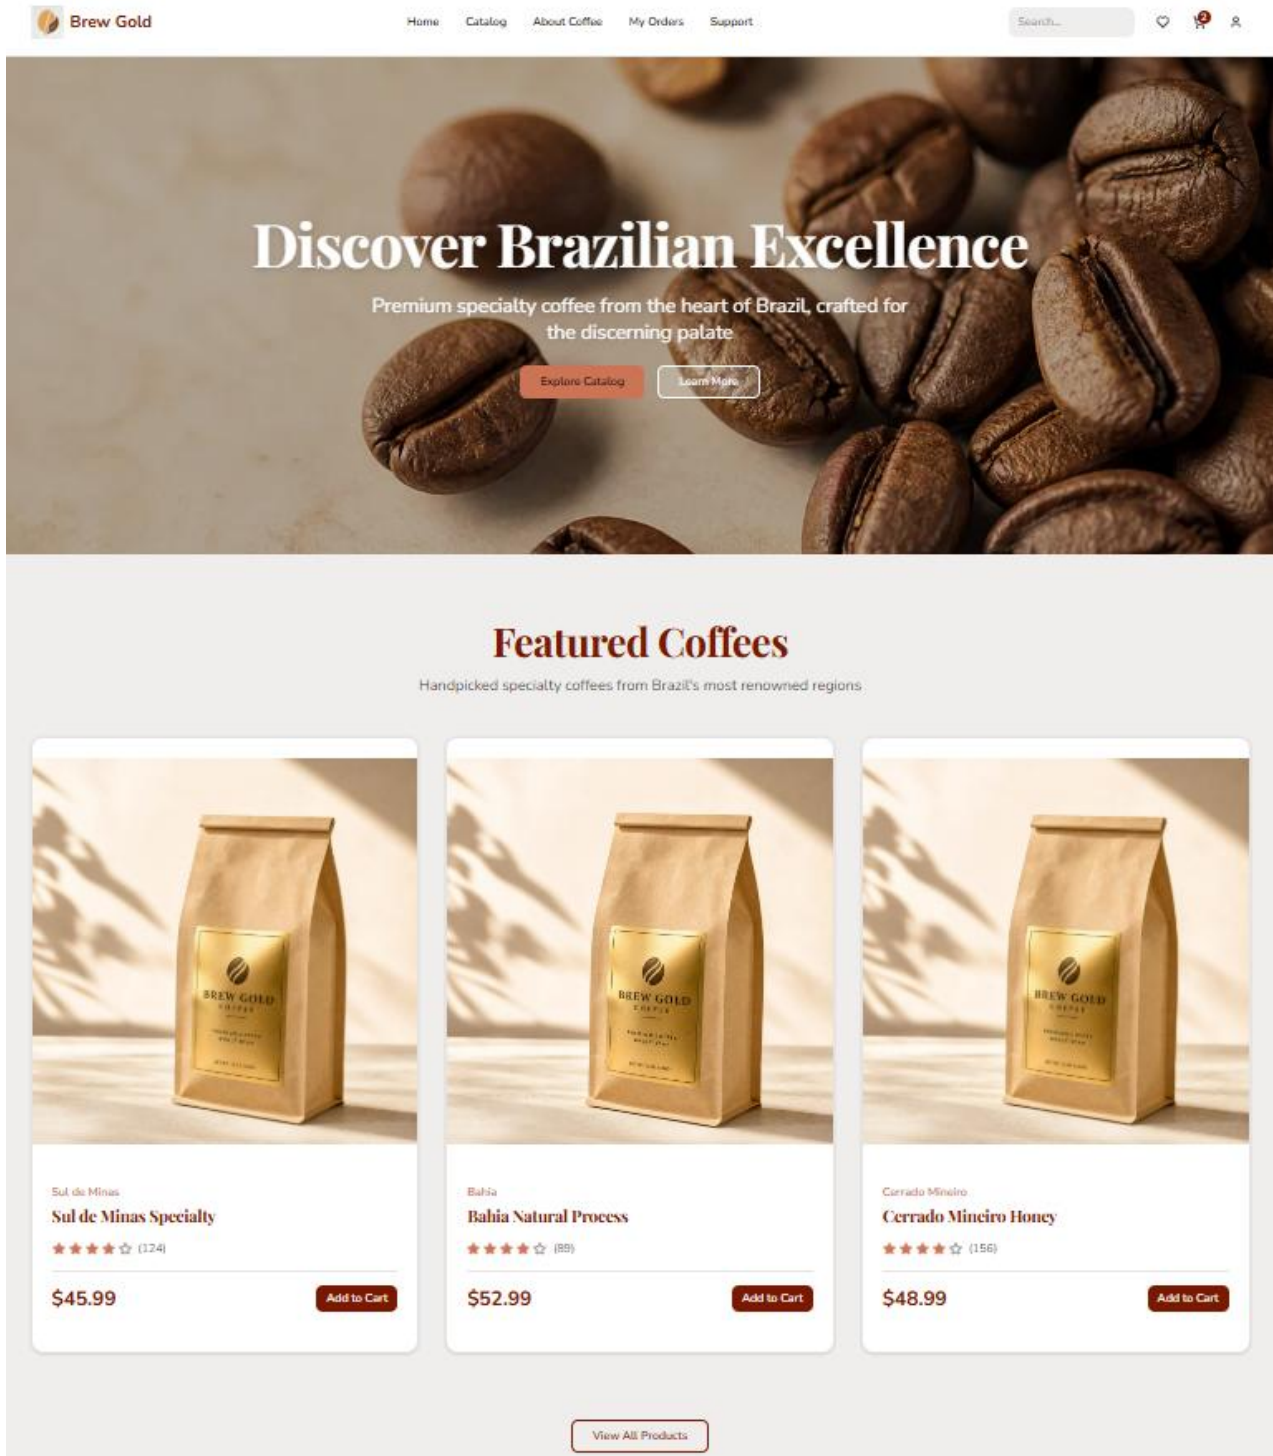

The functionalities described above interact with each other during the user's navigation on the platform. The behavior of these navigation flows can be understood through the representation shown in the figure below.

8. INTERFACE PROTOTYPES

Taking into consideration all the design aspects detailed above, such as goal, visual identity, audience and expected functionalities, the following interfaces were developed for the website:

Home Page

Brazilian Coffee Regions

Each region produces unique flavors shaped by altitude, climate, and soil

Sul de Minas

The largest coffee-producing region in Brazil, responsible for the majority of national production. Known for balanced, chocolate-forward coffees with excellent body and sweetness. Altitude: 1,100-1,400m.

Characteristics:

Balanced Chocolate Caramel Medium Body Arabica

Sustainability:

Leading in sustainable farming practices, agroforestry systems, and environmental conservation. Rainforest Alliance certified.

Bahia

Known for producing fruity and sweet coffees, especially through natural processing methods. The natural fermentation brings out inherent sweetness. Altitude: 800-1,200m.

Characteristics:

Fruity Sweet Full-bodied Berry Notes Natural Process

Sustainability:

Strong commitment to organic farming, biodiversity protection, and sustainable water management practices.

Cerrado Mineiro

A UNESCO Biosphere Reserve and Designation of Origin (DO) certified region producing high-altitude specialty coffees. One of four DO regions in Minas Gerais. Altitude: 1,000-1,300m.

Characteristics:

Nutty Sweet Well-balanced Bright Acidity DO Certified Q Grade 84+

Sustainability:

Certified sustainable production with strict traceability standards and focus on ecosystem preservation. Rainforest Alliance verified.

Mogiana

Historic coffee region in São Paulo state, producing some of Brazil's finest coffees with smooth, mellow characteristics. Altitude: 1,200-1,500m.

Characteristics:

Sweet Mellow Chocolate Smooth Arabica Q Grade 86+

Sustainability:

Pioneer in fair trade and sustainable certification programs. Supports small and medium producers through cooperatives.

Processing Methods

Different processing techniques create distinct flavor profiles

Natural (Dry) Process

The traditional Brazilian method where the entire cherry is sun-dried whole with the bean inside. The pulp dries on the bean, transferring sugars.

Benefits:

Intensifies the coffee's natural sweetness and body, resulting in fruity and complex flavors. Most traditional method used in Brazil.

Flavor Profile:

Fruity, sweet, full-bodied

Washed Process

The pulp is removed by machines using water, and beans are fermented in water channels. The intermediate mucilage layer is also removed.

Benefits:

Creates a clean, bright cup that highlights the origin's characteristics and clarity of flavor. Results in a cleaner coffee profile.

Flavor Profile:

Clean, bright, origin-forward

Honey Process

A hybrid method where the bean is partially washed but the mucilage layer between pulp and bean is maintained during drying.

Benefits:

Preserves part of the coffee's sweetness while maintaining clarity and complexity. Balances natural and washed characteristics.

Flavor Profile:

Sweet, balanced, complex

THE LAND OF COFFEE

From the rich soils of Minas Gerais to the highlands of Bahia, Brazil's diverse regions produce exceptional coffees with distinctive flavors and aromas.

COFFEE-GROWING REGIONS

-  **SUL DE MINAS**
Balanced, sweet, chocolatey
-  **CERRADO MINEIRO**
Fruity, nutty, bright acidity
-  **MOGIANA**
Sweet, mellow, well-balanced
-  **BAHIA**
Fruity, full-bodied, smooth
-  **ESPÍRITO SANTO**
Mild acidity, nutty, chocolatey

Brazilian Coffee Heritage

Discover the story, tradition, and excellence behind every cup

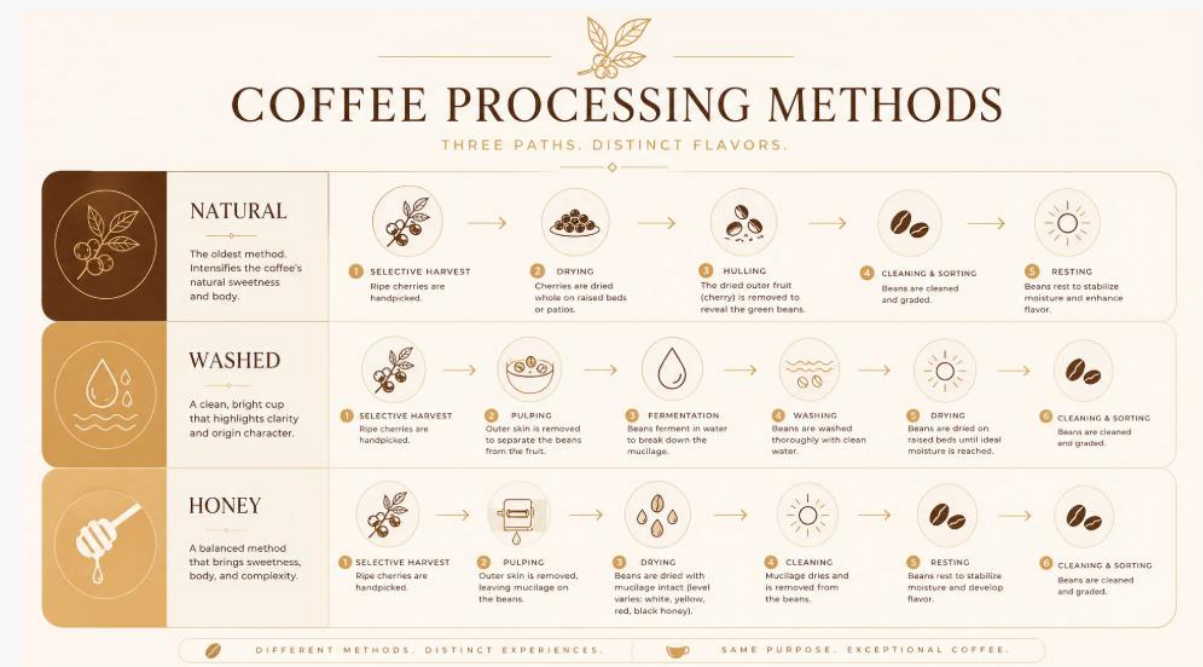

- BAHIA**
Fruity, full-bodied, smooth
- ESPÍRITO SANTO**
Mild acidity, nutty, chocolatey
- CERRADO MINEIRO**
Fruity, nutty, bright acidity
- MOGIANA**
Sweet, mellow, well-balanced
- SUL DE MINAS**
Balanced, sweet, chocolatey

A Rich History

Coffee arrived in Brazil in 1727 and quickly became a pillar of the national economy. From the lush mountains of Minas Gerais to the diverse regions across the country, Brazilian coffee represents centuries of expertise and dedication. Brazil's coffee heritage transformed not only the nation's economy but also established the country as the world's premier specialty coffee producer.

Today, Brazil produces approximately one-third of the world's coffee supply, with Minas Gerais responsible for over 50% of national production. The commitment to quality, sustainability, and innovation has established Brazil as the global standard for specialty coffee excellence, particularly for Arabica beans grown at high altitudes.

Our coffees are predominantly specialty-grade Arabica, scoring 80+ points on the Specialty Coffee Association scale, often grown in certified regions like Cerrado Mineiro with Designation of Origin (DO) status.

[Explore Our Coffees](#)[Made with Manus](#)

Roasting: The Final Stage

After processing, beans are roasted to unlock their full potential. Light and medium roasts preserve the bean's natural characteristics and origin flavors, while dark roasting intensifies bitter and bold notes.

Our specialty coffees are carefully roasted to highlight their unique tasting notes—whether chocolate, caramel, fruity, or floral—ensuring each cup delivers the intended flavor experience.

Quality Standards & Certifications

Understanding the certifications that guarantee excellence

Q Grade Scoring

Certified Q Graders from the Specialty Coffee Association evaluate our coffees for flavor, aroma, acidity, and balance. Coffees scoring 80+ points are recognized as specialty grade. Scores above 85 are excellent, and those surpassing 90 are outstanding—representing the pinnacle of coffee quality.

Designation of Origin (DO)

Official geographical certification guaranteeing that a coffee's quality and characteristics are directly related to its region of production. DO regions like Cerrado Mineiro comply with strict production and traceability standards, ensuring authenticity and consistent excellence.

Rainforest Alliance

Verifies that farms demonstrate environmental, social, and economic responsibility through periodic audits. Criteria include preservation of local biodiversity, reduced water consumption, and adequate working conditions for all employees.

Fair Trade Certification

Focuses on fair prices, adequate working conditions, and community development. Ensures coffee producers and workers receive sustainable compensation and work in safe environments, supporting rural communities and discouraging economic inequality.

Sustainability & Ethics

We're committed to supporting sustainable practices and fair trade principles

Environmental Responsibility

Our partner farms implement sustainable practices including agroforestry with native vegetation, water conservation, and biodiversity protection. Rainforest Alliance certification verifies environmental, social, and economic responsibility through periodic audits. These practices preserve soil quality and support the cultivation of exceptional specialty coffee.

Fair Trade Commitment

We believe farmers deserve fair compensation for their exceptional work. Our Fair Trade partnerships ensure farmers receive sustainable prices and work in safe conditions, supporting their communities and livelihoods.

Quality Standards & Q Grades

Every coffee we offer is specialty grade (80+ points) evaluated by certified Q Graders from the Specialty Coffee Association. We maintain complete traceability from farm to cup, ensuring transparency and accountability throughout our supply chain. Many of our coffees exceed 85 points, with some reaching outstanding status (90+).

Community Impact

By choosing Brew Gold Coffee, you support Brazilian coffee communities, local economies, and sustainable agricultural practices. Together, we're building a better future for coffee farmers and the environment.

9. FUTURE IMPROVEMENTS AND CONCLUSION

The mission of *Brew Gold Coffee* goes beyond being merely a digital commerce platform, but rather a bridge for strengthening the relationship between two different markets and cultures. The design choices presented throughout this document aim to communicate Brazil's tradition in the production of specialty coffees with high added value to the Chinese market, which demonstrates a growing interest in this product.

Although the current prototype covers functionalities essential to any e-commerce platform, the central direction for future expansions on a real website is integration with the Chinese digital ecosystem, adding services such as *Alipay* for payments and *WeChat* for authentication, support assistance and product sharing with contacts. The inclusion of ease-of-use features is also planned, such as a user guide, the possibility of translating the site into Chinese language and the provision of accessibility options. The image search tool, although very useful on the main Chinese e-commerce platforms, was not considered crucial due to the nature of the products sold on this website, but it can be reconsidered in the future. Another very popular aspect in this market is the gamification of the shopping process using in-platform games, which can be incorporated at some point to increase user connection with the brand.

With these additions, *Brew Gold Coffee* can become an environment of great acceptance in the Chinese market, through which consumers will be able to live valuable experiences, discover new unique and memorable flavors from high-quality coffees, instigating the production and export of coffee to China and generating new investments and work opportunities in the Brazilian market as a consequence.
